Example 6; Page 70; 82pp; English.

This sequence is encoded by the SCZ gene which was isolated using the method of the invention. The SCZ gene has been previously identified as CD84, GenBank Accession No: NM 003874. CD84 is a 73 kDa antigen present on platelets, monocytes and circulating B cells. This protein may be involved in the processes by which the brain responds to biological stimuli. Therefore they may provide targets for therapeutic intervention in the treatment of schizophrenia. The SCZ sequence may be used in a new method of diagnosing susceptibility to schizophrenia in a patient. The method comprises determining the presence or absence of an allele of a linked polymorphic marker in the DNA of the patient. The polymorphic marker is present in chromosome 1q22 and is linked to a gene (SCZ) having

The invention relates to nucleic acid molecule, designated CD2000 which encodes a polypeptide containing immunoglobulin (Ig) and Ig-like domains and SIAMA associated protein (SAP) motifs. CD2000 DNA and protein is cuseful for treating disorder such as immune proliferative disorders, useful for treating disorder such as immune proliferative disorders (e.g. carcinoma), viral infection, autoimmune disorders (e.g. arthritis, multiple sclerosis, Grave's disease, and Hashimoto's clesase). T cell disorder (e.g. acquired immune deficiency syndrome (AIDS)), inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis), inflammatory disorders (e.g. rheumatorid arthritis and costeoarthritis), alpoptotic disorders (e.g. rheumatory disorders) septic shock, colitis), apoptotic disorders (e.g. systemic lupus erythematosus, and insulin-dependent diabetes mellitus), cyctoxic disorders, septic shock, chronic obstructive pulmonary disease (e.g. emphysema), bronchitis, cirrhosis, acute myeloid leukaemia, haemophilia and anaemia. CD2000 DNA is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing, forensic biology), predictive comedicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and phramacogenomics), and in methods of treatment (e.g. thereful on the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

```
The invention relates to treating a subject having a condition that

benefits from modulating the balance of regulatory T cell function

crelative to effector T cell function, or vice versa, in a subject. The

method involves administering an agent that modulates the expression or

activity of a molecule selected from PTGER2 and TGFbetal, or Jagged-1,

GRP-32, CD83, CD84, CD89, serotonin R, BYS5, serotonin R2C, GRR63,

Chistamine R-H4, GPR58, ED9-R, PSG-1, PSG-3, PSG-6, PSG-9, PDE-4d, and PI-

CC are useful for diagnosing, preventing or treatment occurs. The methods

are useful for diagnosing, preventing or treatment occurs. The methods

call response to antigens associated with the condition, such as in an

allergic response, an autoimmune disorder, a viral infection, a microbial

cinfection, a parasitic infection or a tumour. The present sequence

represents a human leukocyte differentiation CD84 antigen, preferentially

expressed in regulatory T cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 AYVTPGDSETAPVVTVTHRNYYERIHALGPNYNLVISDLRMEDAGDYKADINTQADPYTT 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating a condition that benefits from modulating regulatory or effector T cell function comprises administering an agent that modulates the expression or activity of a gene or polypeptide (e.g. PTGER2, TGFbeta1,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AYVTPGDSETAPVVTVTHRNYYERIHALGPNYNLVISDLRMEDAGDYKADINTQADPYTT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to PRO proteins and their coding sequences.

The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polygaccharide antigen unresponsiveness, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA confinemia of infancy, Burkit's lymphoma, intermediate lymphoma, follicular lymphoma, type II hypersensitivity, rheumacoid arthritis, autoimmune mediated haemolytic anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or ankylosing spondylitis. The PRO proteins are also useful for preparing a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            300

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic saric sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

The invention relates to a novel isolated nucleic acid and the PRO polypeptide encoded by it. A protein of the invention has antiinfulammatory, antiarthritic, antithemutic, immunosuppressive, osteopathic, autidiabetic, dermatological, antipsoriatic, antiallergic, antiasthmatic, hepatorropic, and respiratory activity. A polynucleotide of the invention may have a use in gene therapy. The PRO polypeptide, its agonist, antagonist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
                                                                                                                                                                       120

                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a secreted human protein encoded by the mucleic acid molecule designated Gene 164 from the human cDNA clone HSAWF26 (deposited as clone ATCC 97903 and ATCC 209049). The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin protein as compared to the human protein only. The invention relates to brotein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511- preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the presence of mutations in the new polynociate or by determining the presence of mutations in the new polynociatedides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see AAV59511 for

The invention relates to an isolated protein that is one of 186 human secreted proteins, given in the specification, encoded by one of 309 cDNA secreted proteins, given in the specification. The protein is used in a condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, packed disorders e.g. alzheimer's disease, confections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound causumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The collure of primary tissues, to regenerate tissues and in chemotaxis. The collures or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents one of the novel human carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents one of the novel human carbohydrate specification, but was obtained in electronic format cortectly from USPTO at seqdata.uspto.gov/sequence.html?pocID=6420526B1
                                                                                                                                               , Rosen CA, Fischer CL, Soppet DP, Carter KC;

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the isolation of novel human secreted proteins and the polynucleotide sequences encoding them. The invention also discloses vectors, host calls, antibodies, and recombinant methods for producing human secreted proteins. The polypeptide and polynucleotide for producing human secreted proteins. The polypeptide and polynucleotide corporating or disgorders leaf or disorders (e.g. hewcompinion treating, considered, blood-related disorders (e.g. haemophilia or thrombootytopenia), immunodeficiencies (e.g. haemophilia or thrombootytopenia), autoimmune disorders (e.g. graft-versus-host disease, thymic hypoplasia), autoimmune disorders (e.g. graft-versus-host disease, contrible sclerosis or Hashimoto's thyroiditis), allergies (e.g. asthma), contrail or bacterial or fungal infections (e.g. Allos or sepsia), remail contrological disorders (e.g. Allos or sepsia), respiratory disorders, neurological disorders (e.g. Allos or sepsia), respiratory disorders, cerebral ischaemia or congenital heart defects), respiratory disorders, neurological disorders (e.g. Crohn's disease). The parknison's disease), and inflammations (e.g. Crohn's disease). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the cyclospectic or polypeptide may also be used as vaccine adjuvants.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the cyclospectine and interesting or patent did not form part of the printed specification, but was obtained in electronic format directly from the

```
The invention describes an isolated nucleic acid comprising a sequence having 95 % identity with: a polynucleotide fragment of a sequence not given in the specification, or its allelic variant; a polynucleotide fragment of the CDNA sequence; a polynucleotide sequence encoding a polypoptide, or its fragment, domain, epitope or species homologue; or a polynucleotide that hybridises under stringent conditions to any one of the sequences of (a)-(c). The nucleic acid is useful for preparing a medicament for diagnosing, preventing, treating or ameliorating a medicament for diagnosing, preventing, treating or ameliorating a medical condition e.g., cancer. The is the amino acid sequence of a novel human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                  JM, Ferrie AM;

                                                                                                                                                                                                                                                                                                                                                        22-AUG-1997
                                                                                                 22-AUG-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ruben SM,
```

The invention relates to isolated nucleic acid molecules and the human secreted proteins (SPs) they encode. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SP expression e.g. cancer, haematopoistic disorders, endocrine disorders, diseases of the immune system, inflammatory disorders and many others. Full details of disorders that may be

Isolated nucleic acid molecules encoding human secreted proteins, useful for preventing, diagnosing and treating disorders associated with aberrant expression and activity.

Claim 11; SEQ ID NO 483; 142pp; English.

```
prevented, diagnosed and/or treated by the above methods are given in the specification. The nucleic acid molecules may be used to produce their proteins. The nucleic acid and it's complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which as antigens in the production of antibodies against the production of antibodies against the proteins and in assays to identify modulators of SP expression and activity. The anti-SP antibodies may also be used to down regulate expression and activity. The anti-SP antibodies may also be used to down regulate expression and activity. The anti-SP antibodies may also be used as diagnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbat assay (ELISA)). The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                               represents the amino acid sequence of a human secreted protein.

human secreted proteins, and encode the proteins given in AAV1250 to human secreted proteins, and encode the proteins given in AAV1251 to AAV12668, respectively. The proteins given represent the signal peptide and an N-terminal fragmen of a secreted human gene be to did sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, call proteins obtained may have cytokine activity, call proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, chemokactic/ chemokinetic activity, haemostatic and thrombolytic activity, receptor/ ligand activity, antiinflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping promoter sequences can also be used for obtaining corresponding promoter directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel isolated immune response associated protein (IRAP) comprising any of 35 fully defined sequences given in the specification. The polypeptide of the invention demonstrates antiarteriosclerotic, cytostatic, neuroprotective, antiparkinsonian, hepatotropic, cerebroprotective, antiinflammatory, nootropic and vasotropic activities and may be useful for treating a disease or condition associated with decreased expression or overexpression of functional immune response associated proteins, while the antibody is useful for diagnosing a condition or disease associated with the Azhreimer's disease, Parkinson's disease and Crohn's disease. Furthermore, the molecules of the invention may be utilised during gene therapy procedures. The current sequence is that of a human IRAP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated immune response associated proteins (IRAP) polypeptide and polynucleotide, useful for diagnosing and/or treating disorders with aberrant expression of IRAP, such as arteriosclerosis, cirrhosis, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 OHHIWILLLCLQTWPEAAGKDSEIFTVNGILGESVTFPVNIQEPRQVKIIAWTS-KTSVA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               QTSLLFLLMGLR----ASCKDSAPTVVSGILGGSVTLPLNISVDTEIENVIWIGPKNALA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to new immunoglobulin superfamily proteins

(IGSFP). The polypeptides, polynucleotides, agonists and antagonists are

(seful for diagnosing, treating or preventing disorders associated with

aberrant expression of IGSFP, particularly cell proliferative, e.g.

arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal

concernal haemoglobiuntia, polycythaemia vera, psorissis, primary

thrombocytopenia or cancers including leukaemia, lymphoma, sarcoma or

myeloma, and autoimmune or inflammatory disorders, e.g. acquired

cmyeloma, and autoimmune or inflammatory disorders, e.g. acquired

cmyeloma, contact dermatitis, languages, gout, Graves' disease,

thyroiditis, contact dermatitis, Crohn's disease, diabetes mellitus,

clomerulonephritis, Goodpasture's syndrome, gout, Graves' disease,

clomerulonephritis, osteoporosis, pancreatitis, Reiter's syndrome, rheumatoid

arthritis, Sjogren's syndrome, uveitis, trauma, or viral, bacterial,

fungal, parasitic, protozoal or helminthic infections They are also

cuseful in the assessment of the effects of exogenous compounds on the

expression of nucleic acid and amino acid sequences of IGSPP. The present

cmino acid sequence represents a human IGSPP protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              62 YVTPGDSETAPVVTVTHRNYYERIHALGPNYNLVISDLRMEDAGDYKADINTQADPYTTT 121

usceptibility to a systemic autoimmune disorder. The method comprises screening for at least one mutation within the systemic lupus erreening for at least one mutation within the systemic lupus erreening for at least one mutation within the systemic lupus erreening for at least one mutation in a gene or genes with the SLE-1B loci such as a gene of genes with the SLE-1B loci such as a gene or genes with the SLE-1B loci such as a gene conding signalling lymphocyte activation molecule (SLAW), lymphocyte activation genes (SLAM), lymphocyte activation factor (USF)!, GD44. The method of the invention is useful for treating SLE and involves administering a construct somprishing a wild-type sequence encoding any one of the above mentioned genes. Gene therapy also involves the use of antisense constructs or ribozymes directed against the above mentioned genes for treating SLE. Note: The present protein sequence represents a human protein of the invention that relates to the isolation of genes within sign-lb that mediate a break in immune tolerance. This sequence is shown in the sequence listing but is not further defined in the specification

Patent No. 5576423
GENERAL INFORMATION:
APPLICANT: Aversa, Gregorio
APPLICANT: Cocks, Benjamin G.
APPLICANT: Cocks, Benjamin G.
APPLICANT: Govers, Benjamin G.
TITLE OF INVENTION: PURFIFED GENES ENCODING MAMMALIAN CELL
TITLE OF INVENTION: SURFACE ANTIGENS; PROTEINS AND ANTIBODIES;
CORRESPONDENCE ADDRESS:
ADDRESSEE: DNAX Research Institute
STREET: 901 California Avenue
CITY: Palo Alto
STATE: California
COUNTRY: USA
Length 307;
Query Match 11.4%; Score 194; DB 3; Length 30
Best Local Similarity 23.8%; Pred. No. 1.9e-11;
Matches 76; Conservative 54; Mismatches 112; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              OPERATING SYSTEM: PC-DOS/MS-DOS

Sequence 2, Application US/08462738

Sequence 2, Application US/08462738

Patent No. 5977303

GENERAL INFORMATION:

APPLICANT: Chang, Chia-Chun J.

APPLICANT: Cocks, Benjamin G.

APPLICANT: Cocks, Benjamin G.

TITLE OF INVENTION: PURIFIED GENES ENCODING MANMALIAN CELL

TITLE OF INVENTION: SURFACE ANTIGENS; PROTEINS AND ANTIBODIES;

NUMBER OF SEQUENCES: 12

CORRESPONDENCE ADDRESS:

ADDRESSEE: DNAX Research Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                 11.4%; Score 194; DB 1; Length 335; 23.8%; Pred. OX-45 membrane glycoprotein precursor - rat

NyAlternate names: MRC OX-45 antigen
C;Species: Rattus norvegicus (Norway rat)
C;Date: 30-Sep-1989 #sequence_revision 30-Sep-1989 #text_change 09-Jul-2004
C;Accession: S01299
R;Killeen, N.; Mossaner, R.; Arvieux, J.; Willis, A.; Williams, A.F.
EMBO J. 7, 3087-3091, 1988
A;Title: The MRC OX-45 antigen of rat leukocytes and endothelium is in a subset of the i
A;Reference number: S01299; MUD:89030603; PMID:3181129
A;Accession: S01299
A;Molecule type: mRNA
